

# MICHAEL MURWAYI

## SOFTWARE DEVELOPER

### Contact

+254-746256084

mikemurwayi7@gmail.com

Nairobi, Kenya

<https://github.com/michaelmurwayi>

### EDUCATION

- Utawala Primary School

(2008 - 2011)

- Pioneer Group Of Schools

(2012 - 2015)

- Meru University of Science and Technology

(2016 - 2021)

### Projects

#### Project Orion

(<https://gitlab.com/mikemurwayi7/orion>)

Production ERP for the coffee industry.

Technologies:

- FastAPI
- SQLAlchemy
- PostgreSQL
- Docker
- React
- Material UI

Features:

- Farmer management
- Coffee inventory
- Sale processing
- Partial sale transactions
- Excel import/export
- Automated reports
- Audit trail
- Role-based authentication

#### Project Orion

(<https://cebba.ke>)

CEBBA company Website

Technologies:

- Docker
- React
- Material UI

Features:

- Home Page
- Service Page
- About Page

#### GIS Coffee Suitability Platform

(<https://github.com/michaelmurwayi/geospacial-api>)

GIS Coffee Suitability Platform

Technologies:

- Docker
- React
- Material UI
- Django Restframework
- Google Earth

Features:

- Containerized deployment
- AI reporting
- Spatial analysis using environmental datasets

### Profile

Full-Stack Software Engineer with 7+ years of experience designing and building scalable enterprise applications, REST APIs, ERP systems, and cloud-native platforms. Specialized in Python (FastAPI, Django), React, PostgreSQL, Docker, and cloud deployment. Experienced in developing transaction processing systems, GIS applications, data pipelines, AI-powered solutions, and automation platforms. Passionate about building secure, maintainable, production-grade software.

### Work Experience

#### Coffee Estate Bourgeoisie Brokers Agency — Full-Stack Developer

(2020- 2023)

- Designed and developed the company website given the company a good online posture.
- Built automated catalogue generation, sale processing, and farmer management modules.
- Developed Excel automation for auction summaries, payout files, and financial reporting helping the team transition from a manual data processing system.
- Implemented REST APIs using FastAPI and SQLAlchemy to handle company records increasing the accuracy and efficiency of reporting to farmers.
- Designed transaction-based inventory architecture supporting partial sales and complete audit trails.

#### Revolution Analytics — Full-Stack Developer

(2020- 2023)

- I developed data scrapping scripts for a machine learning system.
- Developed analytics dashboards for business intelligence.
- Optimized data processing pipelines handling large datasets from webscrapping greatly reducing time used in data collection.
- Automated reporting workflows, reducing manual effort.

#### Finteklabs

(2019 - 2020)

- Designed and implemented dynamic, responsive UIs using Vue.js, AngularJS, and Material Bootstrap.
- Enhanced usability and visual appeal of Zalisha Africa platform, improving user engagement.

#### Ona Kenya — Software Developer

(2018 - 2019)

- Maintained and optimized Django-based Onadata API, reducing query response times.
- Automated deployments with Docker, improving release reliability.
- Collaborated with senior engineers to enhance system scalability.

### Skills

#### Languages

- Python
- JavaScript
- TypeScript
- PHP
- SQL

#### AI & Data

- Pandas
- OpenPyXL
- OCR
- AI Integration
- Data Analysis
- GIS

#### Databases

- PostgreSQL
- MySQL
- MongoDB
- SQLite

#### DevOps

- Docker
- Docker Swarm
- Nginx
- GitHub Actions
- Linux
- AWS
- DigitalOcean
- GCP

#### Frontend

- React
- Material UI
- Redux Toolkit
- Vue.js
- AngularJS

#### Backend

- FastAPI
- Django
- Flask
- SQLAlchemy
- REST API
- JWT Authentication
